Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;  
citations and explanations supporting such statement

Meanwhile, document 2 cited in the international search report discloses a monitoring device for displaying the positional information associated with the master devices and the slave devices and controlling the master devices and the slave devices.

Furthermore, document 3 cited in the international search report discloses a configuration wherein a transmission source address received from a server is compared with the data stored in the terminal management information storage unit, and communication is prohibited in cases when the address and the data do not match.

However, the configuration wherein the monitoring device receives the packet forwarding information that is held by the access point; extracts addresses that have a wireless interface as the forwarding destination from within the packet forwarding information; assumes that the terminal associated with the extracted address is subordinate to the access point that holds the packet forwarding information; investigates the operation state of the terminal associated with the extracted address; and determines that the terminal has been connected to the access point that holds the packet forwarding information in cases when the terminal is operating is not disclosed in any of the documents that are cited in the international search report, and would not have been obvious to a person skilled in the art.
